

Low Bridge Alerting System

A game-changing solution for
preventing bridge strikes

Accurate alerting that's trusted by drivers

- >> Suitable for all vehicle types including tractor and trailer combinations
- >> Easy installation with remote settings configuration
- >> No driver input needed at the start of each journey, everything is set up at installation
- >> AI algorithm unique to VUE to eliminate false positives

How it works...

Vehicle heights inputted during installation
No driver input involved

As a driver travels to their destination

Our predictive AI technology identifies potential risks within 60 seconds,
based on the direction the vehicle is travelling
No need for geofences

If a bridge lower than the height of the vehicle is detected

An in-cab alert is triggered to warn the driver

Developed alongside XPO Logistics

“Our joint developmental contributions to low bridge, trailer-height technology is a demonstration of how we live our values of safety, responsibility and innovation. We share these values with our partner VUE, and are helping refine what is a game-changing technology.”

Dan Myers

XPO Logistics Managing Director – UK and Ireland
